bladder cancer is one of the most common urological diseases with a high mortality rate and poor prognosis it is currently ranked as the 10th most common malignancy worldwide the majority of bladder cancer patients have been found to be diagnosed with non muscle invasive bladder cancer nmibc and the remaining are diagnosed with muscle invasive bladder cancer mibc although there have been advances in the treatment and therapies provided for bladder cancer patients the survival rate remains low primarily due to recurrence and metastasis of the disease following treatment surgical treatment is currently the most common form including radical cystectomy which is the standard form of treatment combined with neoadjuvant chemotherapy however the 5 year overall survival rate is 50 therefore further studies are required to understand the molecular mechanisms involved in the progression of bladder cancer and identify novel biomarkers to act as a diagnostic

tool for patients there have been many studies involving the detection of biomarkers in bladder cancer in addition to monitoring disease recurrence to understand the impact and predict potential outcomes a variety of urine biomarkers have been developed to detect bladder cancer and prognostic risk stratification including mutational dna and the levels of rna expression circulating tumor cells have also been identified as a potential biomarker for bladder cancer patients however there are significant challenges as bladder cancer has demonstrated high levels of cellular and molecular heterogeneity and some markers do not have sufficient sensitivity for accurate detection therefore further studies are required to continue to identify new novel biomarkers for bladder cancer the aim of this research topic is to discuss novel biomarkers in bladder cancer and how it impacts the disease progression and the survival rate for bladder cancer patients

gastric cancer gc represents a serious health problem on a global scale despite some recent advances in the field the prognosis in gc remains poor a better understanding of molecular biology which would lead to improved treatment options is needed many potential biomarkers of prognostic significance have been identified however inhibition of only her2 protein has led to a modest survival benefit a deeper understanding of the pathogenesis and biological features of gastric cancer including the identification and characterization of diagnostic prognostic predictive and therapeutic biomarkers hopefully will provide improved clinical outcomes this research topic aims to provide a comprehensive overview on recent progress in emerging molecular biomarkers for gastric cancer we welcome the submission of review and original research articles covering but not limited to the following topics 1 novel diagnostic molecules to improve the early detection rate for gastric cancer 2 novel prognostic molecules to stratify gastric cancer patients into different risk 3 novel therapeutic biomarker which could serve as target for treating gastric cancer 4 novel biomarker to predict chemotherapy response of gastric cancer patients

plants that fight cancer second edition is a compilation that reviews cancer treatment and research based information on the plant kingdom as the source of both known and novel chemical moieties and mixtures many of them still under identification this new edition follows the organization of the first book with a considerable expansion of content that more than doubles the volume of information divided into four segments the first part is dedicated to a review of our current knowledge of cancer the different types and incidence the molecular pathways of the disease and the various treatment protocols with an emphasis on chemotherapy the second part is a brief journey in pharmacognosy with detailed information about each of the fourteen different chemical groups of plant secondary metabolites their use in cancer chemotherapy and updated information on the biotechnological production of the most representative compounds in clinical practice the third part of the book comprises six chapters dedicated to either plant chemotherapeutical approaches to specific cancer types e g bladder prostate or specific groups of plant secondary metabolites with novel and promising properties for cancer treatment e g naphthoquinones lectins phenanthridone alkaloids the fourth part containing investigative information on almost 300 individual plant species with established anticancer properties either on a clinical or in vitro level is with no doubt the most analytical this new edition contains chapters on cytotoxic phenanthridone alkaloid constituents of the amaryllidaceae

naphthoquinone contained anticancer terrestrial plants polyphenols and cancer immunology medicinal plant product based fabrication nanoparticles au and ag and their anticancer effects bladder and prostate cancer and plant lectins in cancer treatment features provides efficient information for all kinds of cancer and plant chemotherapeutical approaches to specific cancer types discusses specific groups of plant secondary metabolites with novel and promising properties for cancer treatment provides scientific information for medicinal uses of various plants contains analytical information on almost 300 individual plant species with established anticancer properties either on a clinical or in vitro level focuses on plant genera and species that are either already used in cancer chemotherapy or have been identified with antitumor and antileukemic properties to a bigger or lesser extent

thoroughly updated and incorporating the most important advances in the fast growing field of cancer biology the biology of cancer second edition maintains all of its hallmark features admired by students instructors researchers and clinicians around the world the biology of cancer is a textbook for students studying the molecular and cellula

basic consumer health information about gynecologic cancers and related concerns including cervical cancer endometrial cancer gestational trophoblastic tumor ovarian cancer uterine cancer vaginal cancer vulvar cancer breast cancer and common non cancerous uterine conditions with facts about cancer risk factors screening and prevention treatment options and reports on current research initiatives along with a glossary of cancer terms and a directory of resources for additional help and information

the most authoritative comprehensive and clinically focused guide to operative thoracic surgery updated with the latest techniques and technologies a doody's core title for 2019 adult chest surgery is a thorough hands on guide to the modern practice of general thoracic surgery broad in scope and straightforward in style and presentation this classic is an outstanding reference for any clinician in need of a comprehensive description of the clinical nature of general thoracic surgery like its award winning predecessor the second edition of adult chest surgery focuses on providing concise descriptions of current techniques and surgical principles for the most common thoracic surgical problems encountered in the clinic and the operating room this edition is enhanced by 40 new chapters devoted to a range of topics including new endoscopic techniques for antireflux surgery percutaneous thoracic tumor ablation peroral esophageal myotomy robotic techniques for lobectomy esophagectomy and thymectomy and other new minimally invasive approaches to standard thoracic resections it is also enriched by more than 250 new detailed illustrations of procedures bringing the total number to 850 adult chest surgery features a logical organization based on anatomy and each section has an overview chapter which summarizes the relevant anatomy pathophysiology and diagnostic and procedural options throughout operations and diagnostic procedures are highlighted in succinct illustrated technique chapters

gain a thorough understanding of the principles of biochemistry as they relate to clinical medicine a doody's core title for
